

Pico G2 4K

The Pico G2 4K takes the G2's focus on high-performance, sleek design and maximum comfort and enhances the resolution to a crisp 4K for a top-of-the-line experience with a streamlined all-in-one counterweighted design.

If you have high-quality content, the Pico G2 4K is the all-in-one VR headset that will give your target group the best experience. The Pico G2 4K is a standalone virtual reality headset which means no extra equipment is needed. In the all-in-one VR headsets category, Pico G2 4K has the highest resolution, leading to a superior viewing experience.

Another big advantage is that the Pico G2 4K runs on an open Android system. This makes it easier to make changes for business use. Examples of this are deactivating buttons, limiting user rights (kiosk mode), and mobile device management. You also do not necessarily have to use the Pico controller. This makes it a handy VR headset for retail setups, events and trade shows.

Display	4K
Resolution	1920 x 2160 per eye
